Design inputs

Oct 18, 2026 · @Ravin

Eight documents a designer needs before wireframes, in the order to read them. The first three gate design; the rest run alongside.

1. 1 Personas & JTBD — who the owner, staff and customer are in each of the six launch verticals, and the one job each must get done.
2. 2 User flows & screens — every path through the product, step by step, plus the full list of screens.
3. 3 Data model — entities, fields, states and business rules.
4. 4 Brand & theming — Biz4Kit's own brand and the white-label theming rules.
5. 5 Message templates — every ready message, with English wording and variables.
6. 6 Competitor teardown — what Zoho, Vyapar, Refrens and others do well and where they leave room.
7. 7 NFRs — non-functional requirements: performance, offline, accessibility, privacy.
8. 8 Glossary — one meaning per term, used in all UI copy.
9. 9 Competitor glossary — the words Vyapar, Zoho, Refrens and Dukaan use, each mapped to our simpler word, with import mapping and familiar-word hints.

Personas & jobs-to-be-done

Oct 18, 2026 · @Ravin

Biz4Kit serves three people in every business: the owner who sets it up, the staff who use it on site, and the customer who never logs in. The verticals change the vocabulary and the device, not the three jobs: get a quote out fast, get the work done without retyping, get paid without chasing.

Core personas

	Owner — "Priya"	Staff — "Rahul"	Customer — "Anita"
Who	Runs the business, 30–50, does sales and accounts herself; 1–15 staff	Technician, stylist, sales executive or designer, 20–35; paid per month, not per task	Walk-in or online buyer; a consumer (salon, restaurant) or another business (wholesale, IT, manufacturing)
Device & context	Laptop in the evening, phone all day; multitasking between customers	Android phone only, often one-handed, on site, patchy network	Phone, arriving from a WhatsApp link, QR code or Instagram bio; will not install anything or create an account
Jobs to be done	Send a professional quote within minutes of an enquiry; know what is owed and by whom; look bigger than she is	Know today's bookings and jobs; finish a job and move on without paperwork; not get blamed for a missed payment	See prices without asking; get a clear quote quickly; pay the way she already pays (UPI) and get a receipt
Frustrations today	Price list is a stale PDF; quotes typed in WhatsApp get lost; invoices in Word; chasing payments by hand; every tool looks like someone else's brand	Told things verbally and forgets; takes photos that end up nowhere; calls the owner for every price	"Send me the rate list" gets a photo; quotes contradict each other; no proof of what was agreed
Trust signals	Her logo and colours on everything; GST-correct invoices; nothing her customers see says Biz4Kit	Clear list of what is mine today; marking a job done takes two taps	A branded page with the business's name, a quote number, a validity date, a receipt
Success metric	Enquiry→quote under 10 minutes; overdue list shrinks week on week	Zero jobs finished without an invoice created	Accepts on the first quote; pays within 48 h of the invoice

	Owner — "Priya"	Staff — "Rahul"	Customer — "Anita"
Permissions	Everything, including approving payment proofs and billing	Own bookings and jobs; create quotes and invoices; upload payment proof	None; acts only through private links

Vertical sheets

Vertical	Owner & team	Customer	Where they sell today	Top job for Biz4Kit	Vocabulary & defaults
Salon / spa	Owner-stylist + 3–8 stylists on shifts	Consumers, repeat visits every 3–6 weeks, book by WhatsApp or walk in	Instagram, Google Maps, WhatsApp	Bookings with a visible service menu; packages (bridal, monthly)	"Services", "appointment", "package"; per-stylist calendar; prices per service
IndiaMART wholesaler	Proprietor + 1–3 sales executives handling marketplace leads	Other businesses, price-sensitive, ask for quotes in bulk, negotiate	IndiaMART enquiries, phone, WhatsApp	Turn a marketplace enquiry into a quote in minutes; GST invoice with HSN codes	"Products", "MOQ", "rate", "proforma invoice"; quantity tiers; HSN per item; delivery terms
Restaurant / café	Owner + manager + kitchen; catering side business	Dine-in diners (menu via QR) and event hosts (catering quotes)	Zomato / Swiggy, QR menus, WhatsApp	QR menu that is always current; catering quote with per-plate pricing	"Menu", "dish", "per plate", "event date", "advance"; veg / non-veg tags; deposits
IT services	Founder + 2–10 engineers	SMBs buying websites, apps, AMC support; expect proposals and milestones	Referrals, LinkedIn, Upwork	Proposal-style quote with scope and milestones; milestone invoices; AMC packages	"Proposal", "scope", "milestone", "AMC", "retainer"; hourly and fixed; partial invoices

Vertical	Owner & team	Customer	Where they sell today	Top job for Biz4Kit	Vocabulary & defaults
Small manufacturer	Owner + production supervisor + sales	Dealers and businesses; repeat orders; specifications matter	Dealers, IndiaMART, trade fairs	Quotes with specifications and lead time; job tracking from order to dispatch	"Items", "specification", "lead time", "dispatch", "GST / HSN"; units (kg, pcs, m)
Design agency	Founder + 2–8 designers	Startups and SMBs; want options and a clear price per deliverable	Instagram, Behance, referrals	Package tiers (Basic / Standard / Premium); doc-style proposal the client accepts online	"Proposal", "deliverable", "revision", "retainer"; packages; 50% advance invoice

Design implication: the generators are identical across verticals; what changes per vertical starter kit is labels (service / product / dish / deliverable), default units, whether HSN and MOQ fields show, and whether bookings or milestones are the default follow-on to an accepted quote.

User flows & screen map

Oct 18, 2026 · @Ravin

Four flows cover Phase 1; the screen map lists 34 screens across onboarding, workspace, generators and the customer portal.

Flow 1 — Owner onboarding (target: 8 minutes to a shareable catalog)

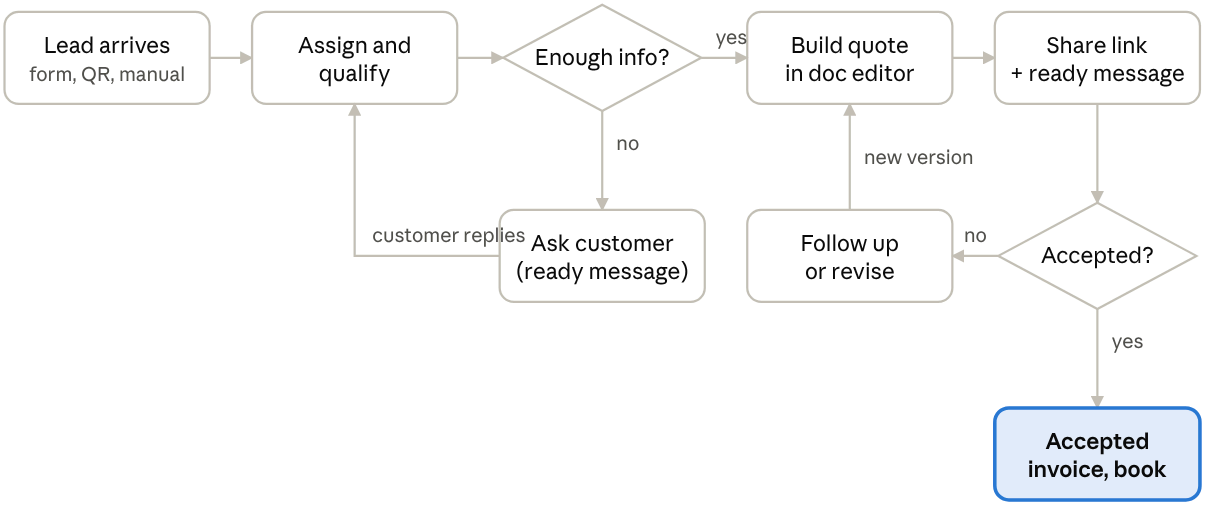

1. Land on biz4kit.app → **Continue with Google** (web or app). Better Auth creates the user; email is already verified by Google.
2. **Create workspace**: business name → slug suggested (`brand.biz4kit.app`), vertical picked from six cards.
3. **Brand**: upload logo (light; dark optional), pick two colours or let the app extract them from the logo; live preview of a quote header and the catalog page.
4. **Business details**: phone, address, GST number (optional, unlocks GST fields), UPI ID for payment requests, invoice prefix.

5. **Catalog starter**: vertical starter kit loads sample items and packages; owner edits prices inline, deletes what doesn't apply, or imports a CSV.
6. **Invite team**: email addresses with role; invites can be skipped and done later.
7. **Done screen**: catalog link, QR code to download, "share price list" ready message. First-run checklist stays on the dashboard until a first quote is sent.

Exit points: close at any step and the workspace is saved; re-entry returns to the same step. Verification loop: an invited member signs in with Google, sees the pending invite, accepts, lands in the right workspace with the assigned role.

Flow 2 — Lead to accepted quote

A lead becomes an accepted quote; missing info and rejections loop back

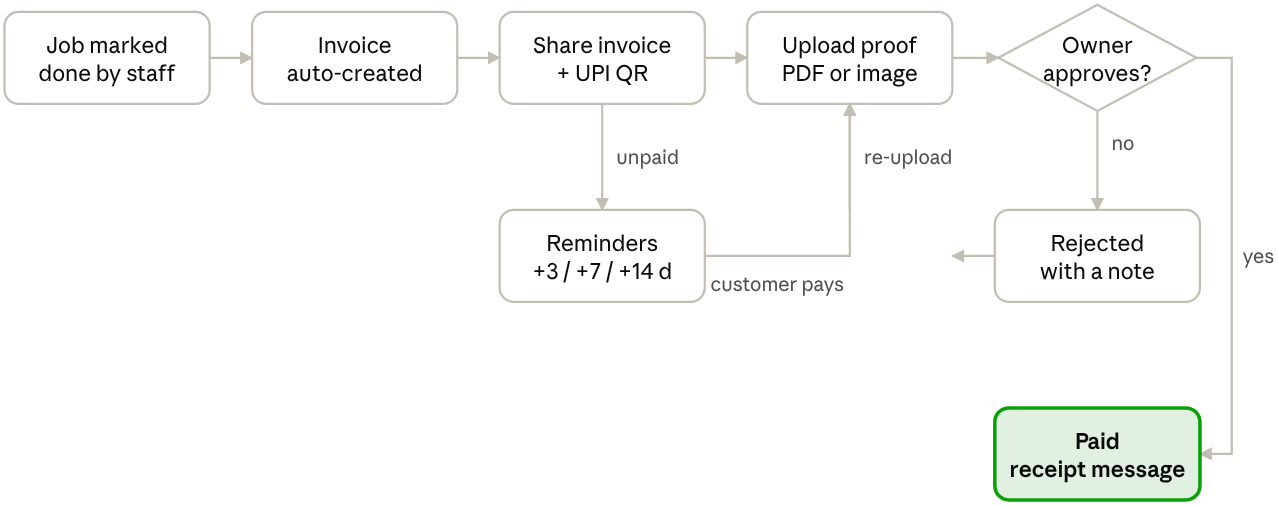

lead to accepted quote · 7 steps, 2 decisions, 2 loops

Both loops are ready messages the staff member sends by hand in Phase 1 and the system sends in Phase 2. A revised quote is a new version of the same quote number; the customer's link always shows the latest.

Flow 3 — Job to paid

An invoice turns Paid only after the owner approves the proof

job to paid · owner approval gate, reminder and re-upload loops

Any member can upload proof; only the Owner (or a Manager if the owner delegates it in settings) can approve. Approval writes the Payment record, flips the invoice to Paid and offers the receipt message. The same gate applies to a gateway payment in Phase 2 only when the webhook fails to match an invoice.

Flow 4 — Customer portal (no account, ever)

1. **Arrive** at `brand.biz4kit.app` from a QR code, WhatsApp link or Instagram bio. Page loads in the business's brand; no Biz4Kit chrome.
2. **Browse** categories, packages, search; tap an item for photos, variants, add-ons. Prices visible by default; the owner can hide prices per item ("ask for a quote").
3. **Request a quote**: basket of items or a free-text brief, photos, preferred date, location, name and phone. Submit creates a Lead and shows a confirmation with the business's phone number.
4. **Receive the quote** as a private link (sent by the team). The page shows line items, optional items to toggle, total, validity, terms, and the business's contact. **Accept** = name + phone + tap; a PDF copy is downloadable.
5. **Book** (bookable packages only): pick staff and slot from availability; confirmation screen with add-to-calendar.

6. **Pay**: the invoice page shows amount, UPI deep link (opens any UPI app), QR, bank details; "I have paid" lets the customer upload a screenshot that lands in the owner's approval queue. Status on the page updates to Paid after approval; receipt downloadable.
7. **My orders**: a private per-customer link (sent on first quote) listing every quote, booking, invoice and receipt.

Private links are long random tokens; opening one is the proof of identity. Phase 2 adds OTP where the owner wants it.

Screen map (Phase 1)

Area	Screen	Route	Primary action	Who
Auth	Sign in	`/login`	Continue with Google	Owner, Staff
Auth	Accept invite	`/invite/:token`	Join workspace	Staff
Onboarding	Create workspace	`/new`	Create	Owner
Onboarding	Brand setup	`/new/brand`	Save and preview	Owner
Onboarding	Business details	`/new/details`	Save	Owner
Onboarding	Catalog starter	`/new/catalog`	Keep / edit / import	Owner
Onboarding	Invite team	`/new/team`	Send invites / skip	Owner
Workspace	Dashboard	`/w/:slug`	Today: bookings, jobs, approvals, overdue	All

Area	Screen	Route	Primary action	Who
Workspace	Pipeline board	`/w/:slug/pipeline`	Drag record between stages	Owner, Manager, Staff
Leads	Leads inbox	`/w/:slug/leads`	Assign, open, create quote	All
Leads	Lead detail	`/w/:slug/leads/:id`	Create quote	All
Catalog	Items list	`/w/:slug/catalog`	Add item, reorder, import CSV	Owner, Manager
Catalog	Item editor	`/w/:slug/catalog/:id`	Save	Owner, Manager
Catalog	Packages	`/w/:slug/packages`	Add tier	Owner, Manager
Quotes	Quotes list	`/w/:slug/quotes`	New quote	All
Quotes	Quote editor (doc)	`/w/:slug/quotes/:id`	Share	All
Quotes	Share sheet	modal	Copy link / message, PDF, WhatsApp	All
Bookings	Calendar	`/w/:slug/bookings`	New booking, drag to move	All
Jobs	Job list	`/w/:slug/jobs`	Open job	Staff, Manager
Jobs	Job detail	`/w/:slug/jobs/:id`	Mark done	Staff
Invoices	Invoices list	`/w/:slug/invoices`	New invoice, overdue filter	Owner, Manager, Accountant

Area	Screen	Route	Primary action	Who
Invoices	Invoice editor (doc)	`/w/:slug/invoices/:id`	Share, request payment	All
Payments	Record payment / upload proof	modal	Submit for approval	All
Payments	Approval queue	`/w/:slug/approvals`	Approve / reject	Owner
Customers	Customer list	`/w/:slug/customers`	Open	All
Customers	Customer timeline	`/w/:slug/customers/:id`	New quote	All
Reports	Reports	`/w/:slug/reports`	Export CSV	Owner, Accountant
Settings	Brand, business, numbering, team, roles	`/w/:slug/settings/*`	Save	Owner
Portal	Catalog	`brand.biz4kit.app`	Request a quote	Customer
Portal	Quote request form	`/request`	Submit	Customer
Portal	Quote page	`/q/:token`	Accept	Customer
Portal	Booking picker	`/book/:package`	Confirm slot	Customer
Portal	Invoice & pay page	`/i/:token`	Pay by UPI, upload proof	Customer
Portal	My orders	`/me/:token`	Open any record	Customer

34 screens; 9 of them are shared doc-style views (quote and invoice editors, their portal pages and PDFs render from the same blocks).

Data model & business rules

Oct 18, 2026 · @Ravin

Twelve entities, all scoped by `workspace_id`; a CatalogItem is the unit everything else is built from, and a QuoteLine is copied, never referenced, so a later price change never alters a sent quote.

Entities

Every table has `id`, `workspace_id`, `created_at`, `updated_at`, `created_by`; those are omitted below.

Entity	Key fields	Relations	Notes
Workspace	name, slug, vertical, logo_light, logo_dark, color_primary, color_accent, gst_number, address, phone, upi_id, bank_details (json), currency = INR, numbering (json: quote_prefix, invoice_prefix, next_quote, next_invoice), terms_default, plan	has many of everything	slug unique globally
Member	user_id, role (owner / manager / staff / accountant), status (invited / active / removed), invited_email	belongs to Workspace; User from Better Auth	one Owner minimum, enforced
Customer	name, phone (unique per workspace), email, company, gst_number, address, tags[], portal_token, notes	has many Lead, Quote, Booking, Invoice	portal_token = My-orders link

Entity	Key fields	Relations	Notes
CatalogItem	name, description, category, photos[], unit (hr / pc / kg / m / sqft / plate / day), price, gst_rate, hsn_code, variants (json), addons (json: name, price), moq, show_price, is_active, sort_order	belongs to Workspace; referenced by Package, copied into QuoteLine	price change never touches past quotes
Package	name, tier (basic / standard / premium / none), items (json: item_id, qty), price, billing (one_time / monthly), is_bookable, duration_min, description, is_active	belongs to Workspace	package → quote starter copies items
Lead	customer_id, source (qr / web / instagram / referral / manual / marketplace), brief, photos[], preferred_date, location, assignee_id, priority, status, snoozed_until	has many Quote	created by portal form or manually
Quote	number, version, customer_id, lead_id, doc (json blocks), lines (QuoteLine[]), subtotal, discount, tax_total, total, valid_until, status, accepted_at, accepted_by_name, accepted_by_phone, token	has many Invoice, Booking	new version = same number, version + 1; `is_proforma` flag renders it as a proforma invoice
QuoteLine (embedded)	item_id (nullable), name, description, qty, unit, unit_price, gst_rate, hsn_code, is_optional, is_selected, sort	inside Quote and Invoice	snapshot of item at time of writing

Entity	Key fields	Relations	Notes
Booking	customer_id, quote_id, package_id, member_id, start_at, end_at, status, notes	has one Job	conflict check on member + time
Job	booking_id, quote_id, customer_id, assignee_id, checklist (json), photos_before[], photos_after[], time_logged_min, materials (json), status, completed_at	has one Invoice	complete → invoice auto-created
Invoice	number, customer_id, quote_id, job_id, doc (json blocks), lines (QuoteLine[]), subtotal, discount, tax_total, total, paid_total, due_date, status, token	has many Payment	sequential number, gap-free
Payment	invoice_id, amount, method (upi / bank / cash / card / gateway), reference, proof_files[], uploaded_by, status, approved_by, approved_at, reject_note, gateway (json, Phase 2)	belongs to Invoice	approval is the only way to Paid in Phase 1
Message	record_type, record_id, event, channel (whatsapp / sms / email / copy), body, sent_by, sent_at	belongs to any record	Phase 1: logged when staff taps share
ActivityLog	record_type, record_id, actor_id, action, diff (json)	belongs to any record	audit for every mutation

State machines

Entity	States	Transitions	Who
Lead	new → contacted → quoted → won / lost / snoozed	quoted when a quote is shared; won when a quote is accepted; lost is manual with a reason	Staff, Manager
Quote	draft → shared → viewed → accepted / declined / expired; any → revised (new version, back to shared)	viewed on first portal open; expired by `valid_until` nightly job; accepted only from the portal	Customer accepts; team shares
Booking	tentative → confirmed → in_progress → completed / cancelled / no_show	confirmed when accepted quote or owner confirms; in_progress starts a Job	Staff, Customer (book)
Job	open → in_progress → done → invoiced	done requires checklist complete (configurable); invoiced when invoice auto-created	Staff
Invoice	draft → sent → partially_paid → paid; sent / partially_paid → overdue (past due_date); any unpaid → void	paid when sum of approved payments ≥ total; void only by Owner, keeps the number	Team, Owner
Payment	pending_approval → approved / rejected	approve or reject with note; rejected can be re-uploaded as a new Payment	Owner (or delegated Manager)

Business rules

- **Numbering**: `{prefix}-{FY}-{seq}` e.g. `INV-2627-0042`, FY = Indian financial year (April–March); an invoice number is assigned at first share (drafts are unnumbered), gap-free and never reused thereafter; quotes may skip; a quote issued as a proforma uses the `PI-` prefix and is not a tax invoice; voided invoices keep their number.

- **Totals**: line_total = qty × unit_price; discount applies before tax (line or whole quote, never both); tax per line at the item's GST rate; CGST + SGST when customer state = workspace state, IGST otherwise; totals stored as integers in paise.
- **GST fields appear only if the workspace has a GST number**; HSN shows only for item units that are goods; a customer GST number switches the invoice to B2B format.
- **Validity**: default 15 days; expired quotes can be revived as a new version.
- **Optional lines** on a quote are excluded from the total until the customer selects them; the accepted selection is frozen into the invoice.
- **Approval**: a payment turns an invoice Paid only after Owner approval; proof file required for upi / bank, optional for cash; approver cannot be the uploader when another approver exists; approval works from the email link (single-use, expires in 48 h) or in-app; a Manager may approve below a per-workspace amount threshold set by the Owner.
- **Deposits**: a quote may require an advance %; accepting creates an advance invoice immediately and a balance invoice on job completion.
- **Tenancy**: every query is filtered by `workspace_id` in the API and by Postgres RLS; portal tokens are 32-byte random, revocable, and scoped to one record or one customer.
- **Deletion**: records are soft-deleted; customers can request export or erasure of their data (DPDP), which anonymises Customer and keeps invoice numbers for tax.

Brand & theming

Oct 18, 2026 · @Ravin

Two brands live in the product: Biz4Kit's own, seen by owners and staff inside the workspace, and each business's, seen by its customers on every link, PDF and message. The rule is simple: anything a customer sees carries the business's brand and nothing else.

Biz4Kit brand (proposed, for the designer to refine)

Element	Decision
Name	**Biz4Kit**, always one word with a capital B and K; never "Biz 4 Kit" or "biz4kit" in copy. Tagline: *Quote, book, invoice, get paid. Under your own name.*

Element	Decision
Voice	Plain, warm, short. Second person. Says "you" and "your customer", never "the user". No jargon (no "CRM", "pipeline" in customer-facing copy).
Palette (proposed)	Primary: deep teal `#0F766E`; accent: amber `#F59E0B`; neutrals: warm greys; semantic: green / amber / red for paid / due / overdue. Teal reads trustworthy in finance contexts and is rare among Indian SMB tools (Vyapar red, Zoho red/blue).
Type	UI: Inter (web) / system font (mobile). Numbers: tabular figures everywhere money appears. PDFs: Inter embedded.
Logo	Wordmark with a four-square "kit" glyph; must work at 24 px (favicon) and in a single colour.
Tone of UI	Linear-like: dense but calm, keyboard-friendly on desktop, large touch targets on phone, dark and light. Biz4Kit's own colours appear only in the workspace chrome (sidebar, settings, sign-in).

White-label rules

Surface	Brand shown	Biz4Kit presence
Sign-in, onboarding, settings, billing	Biz4Kit	Full
Workspace app (dashboard, lists, editors)	Biz4Kit chrome; the business's logo in the workspace switcher; brand colour tints primary buttons and tags	Logo in sidebar
Public catalog page	Business	Free plan: small "Made with Biz4Kit" footer link. Paid: none

Surface	Brand shown	Biz4Kit presence
Quote page, invoice page, pay page, My orders	Business	Free plan footer only
PDF quote, invoice, receipt, menu	Business: logo, colours, name, GST details, terms	Free plan: one-line footer. Paid: none
Ready messages (WhatsApp, SMS, email)	Business name in the first line and the sign-off	Never
Emails (Phase 2)	From "{Business} via Biz4Kit" on Starter / Team; own domain on Agency	Sender domain only
QR codes	Business colour, logo in centre	None

Rule of thumb for any new surface: if a customer of the business can see it, it carries the business's brand and, on paid plans, nothing of ours.

Theme generation

The owner picks two colours (or the app extracts them from the logo); everything else is derived, so no business can produce an unreadable page.

1. **Inputs**: `primary`, `accent`, logo light (required), logo dark (optional).
2. **Derived tokens**: primary 50–900 scale (OKLCH lightness steps), `on-primary` chosen as white or near-black by contrast; accent used only for highlights and the QR centre; surface and text neutrals are fixed per light / dark theme; semantic colours (paid / due / overdue) are fixed and never overridden.
3. **Contrast gate**: text on primary ⩾ 4.5:1, large text ⩾ 3:1 (WCAG AA). If the chosen primary fails as a button background in a theme, the app shifts its lightness until it passes and tells the owner.
4. **Dark mode**: if no dark logo is uploaded, the light logo is placed on a light chip; primary is lightened one step for dark surfaces.
5. **PDF**: uses the light theme always; primary for the header band and table header, black text, logo max 48 mm wide.
6. **Storage**: tokens are generated once on save and stored on the Workspace as CSS variables and a PDF palette; pages read variables, never raw colours.

7. **Logo rules**: SVG or PNG ⩾ 512 px, transparent background preferred; auto-trimmed; shown at fixed heights (32 px nav, 56 px page header, 48 mm PDF); never stretched.

Message templates

Oct 18, 2026 · @Ravin

Seventeen events produce a ready message in Phase 1. Each is written once in English, in a warm, plain voice, and rendered with the business's name; staff copy or share it, and in Phase 2 the same template is sent automatically.

Template rules

- **Variables** in braces: `{business}`, `{customer_first}`, `{quote_no}`, `{invoice_no}`, `{amount}`, `{due_date}`, `{valid_until}`, `{link}`, `{upi_id}`, `{date}`, `{time}`, `{staff}`, `{service}`, `{sender}`. Amounts render as `₹12,500`; dates as `Tue 21 Oct`.
- **Channel lengths**: WhatsApp ⩽ 60 words with the link on its own line; SMS ⩽ 160 characters, link shortened; email adds a subject and a one-line sign-off.
- **Tone**: first name, one courtesy, the fact, the link, the sign-off with the business name. No exclamation marks except the payment-received message. No emoji by default; owner can turn on a single leading emoji per template.
- **Editable**: the owner can edit any template in settings; a reset restores the default. Vertical starter kits swap nouns (service / product / dish / deliverable).
- **Logged**: tapping copy or share writes a Message row on the record, so the timeline shows what was sent even though Phase 1 never sends anything itself.

Template catalog (English defaults)

#	Event	Trigger	To	WhatsApp / SMS text	Email subject
1	Price list	Owner taps share on the catalog	Prospect	Hi {customer_first}, here is our current price list from {business}. Tap to browse and request a quote: {link} — {sender}, {business}	Our price list — {business}

#	Event	Trigger	To	WhatsApp / SMS text	Email subject
2	Quote request received	Portal form submitted	Customer	Thanks {customer_first}, {business} has your request. We will send a quote shortly. Questions? Reply here.	We received your request — {business}
3	Need more details	Staff taps "ask customer" on a lead	Customer	Hi {customer_first}, to prepare your quote {business} needs a little more detail: {question}. Reply here when convenient.	A quick question about your request
4	Quote sent	Quote shared	Customer	Hi {customer_first}, your quote {quote_no} from {business} is ready: {link}. It is valid until {valid_until}. Tap Accept on the page to confirm. — {sender}	Your quote {quote_no} from {business}
5	Quote revised	New version shared	Customer	Hi {customer_first}, {business} has updated quote {quote_no}. The same link shows the new version: {link}	Updated quote {quote_no}
6	Quote follow-up	Staff taps follow-up (+3 days default)	Customer	Hi {customer_first}, just checking whether quote {quote_no} works for you. Happy to adjust anything: {link} — {sender}, {business}	Following up on quote {quote_no}
7	Quote expiring	2 days before valid_until	Customer	Hi {customer_first}, quote {quote_no} from {business} expires on {valid_until}. Accept here to lock the price: {link}	Quote {quote_no} expires {valid_until}
8	Quote accepted	Customer accepts	Customer	Thank you {customer_first}, quote {quote_no} is confirmed. {business} will be in touch about next steps. Your records: {link}	Confirmed: quote {quote_no}

#	Event	Trigger	To	WhatsApp / SMS text	Email subject
9	Quote accepted (internal)	Customer accepts	Assignee	{customer_first} accepted {quote_no} ({amount}). Next: create booking or invoice. {link}	—
10	Booking confirmed	Booking confirmed	Customer	Hi {customer_first}, you are booked with {business} on {date} at {time} for {service} with {staff}. Details: {link}	Booking confirmed — {date} {time}
11	Booking reminder	24 h before	Customer	Reminder from {business}: {service} tomorrow, {date} at {time}. Reply if you need to reschedule.	Reminder: tomorrow at {time}
12	Invoice & payment request	Invoice shared	Customer	Hi {customer_first}, invoice {invoice_no} from {business} for {amount} is ready: {link}. Pay by UPI to {upi_id} or scan the QR on the page. Due {due_date}.	Invoice {invoice_no} — {amount} due {due_date}
13	Payment reminder +3	3 days after due	Customer	Hi {customer_first}, a gentle reminder that invoice {invoice_no} ({amount}) from {business} is due. Pay here: {link}	Reminder: invoice {invoice_no}
14	Payment reminder +7 / +14	7 and 14 days after due	Customer	Hi {customer_first}, invoice {invoice_no} for {amount} is now {days} days overdue. Please pay at {link} or reply if there is an issue. — {business}	Overdue: invoice {invoice_no}
15	Payment received	Owner approves proof	Customer	Thank you {customer_first}! {business} has received {amount} for invoice {invoice_no}. Receipt: {link}	Receipt for {invoice_no}
16	Proof rejected (internal)	Owner rejects	Uploader	Proof for {invoice_no} was not approved: {reject_note}. Please re-upload.	—

#	Event	Trigger	To	WhatsApp / SMS text	Email subject
17	Job completed	Staff marks done	Customer	Hi {customer_first}, {service} is complete. Thank you for choosing {business}. Your invoice follows shortly.	Work completed — {business}

Competitor teardown

Oct 18, 2026 · @Ravin

Nobody in the Indian SMB market combines a public catalog, doc-style quotes, invoicing, bookings and white-label branding; each competitor owns one or two of these. Product facts below are from general knowledge, not a fresh check: verify pricing and features on each site before quoting them.

Comparison (approximate, verify before quoting)

Product	Built for	What they do well (copy this)	What they don't do (our room)
Vyapar	Indian kirana / trader accounting on Android	Offline-first mobile app; GST invoicing and e-way bills; very fast item entry; cheap annual plans; huge SMB trust	No public catalog or customer portal; invoices look like accounting output; no quotes-as-docs, no bookings; branding limited to a logo on the invoice
Zoho Invoice / Zoho Books	SMB invoicing, free tier, deep accounting	Clean invoice templates; recurring billing; customer portal with online payment; multi-gateway; strong reports	Generic, not white-label (Zoho branding, zoho.in domains); setup heavy; no catalog page, leads or bookings; quote is a form, not a document

Product	Built for	What they do well (copy this)	What they don't do (our room)
Refrens	Indian freelancers and agencies	Beautiful quote and invoice design; proposal flow; client portal; GST; freelancer network	Still a form-based editor; no bookings or job tracking; no team pipeline; limited white-label
Square (Invoices + Appointments)	US/UK service businesses	Bookings + invoices + payments in one brand; polished customer-facing pages; staff calendars	Not available / not relevant in India (no UPI, no GST); not white-label
Bookipi / Invoice Simple	Solo tradespeople worldwide	Fastest possible first invoice; mobile-only simplicity	No team, no catalog, no pipeline; weak India localisation
Dukaan / Bikayi (catalog-commerce apps)	Indian micro-sellers	WhatsApp-native storefront; QR catalog; UPI payments; extremely simple onboarding	Built for selling fixed-price goods, not quoting services; no invoices-as-docs, no bookings or job tracking

Takeaways for design

1. **Copy Vyapar's speed, not its look.** Item entry and invoice creation must be as fast on Android; the output must look like Refrens, not an accounting ledger.
2. **Copy Dukaan's onboarding.** Phone, name, logo, share a link in under five minutes; that is the bar for Flow 1.
3. **Own the gap nobody fills**: public catalog → quote as an editable document → booking / job → invoice → UPI payment, all under the business's brand. No competitor connects these five.
4. **White-label is the moat for agencies and IT services**; Zoho and Refrens leak their brand on every customer touchpoint.

5. **Quotes as documents** (optional lines, scope text, versions, accept on the page) is the single most differentiating screen; invest the design time there.
6. **Match Vyapar on offline tolerance** at least for reading today's bookings and jobs, and for drafting a quote (see NFRs).
7. **Do not compete on accounting depth**; export to Tally / Zoho Books in Phase 3 instead.

Non-functional requirements

Oct 18, 2026 · @Ravin

The product must feel instant on a ₹10,000 Android phone over a patchy 4G connection, because that is where staff and customers use it. Every target below is testable and belongs in the Phase 1 quality gate (WBS 4.1).

Requirements

Category	Requirement	Target	How verified
Performance	Public catalog and quote pages load fast on a mid-range Android over 4G	LCP ⩽ 2.5 s on a Moto G-class device, Slow 4G throttle; page weight ⩽ 300 KB before images	Lighthouse in CI on every PR
Performance	Workspace actions feel instant	Interaction to next paint ⩽ 200 ms; optimistic updates for status changes	Web vitals telemetry
Performance	PDF generation	⩽ 3 s for a 2-page quote; queued, never blocks the UI	Job metrics
Offline	Staff can read today's bookings and jobs and draft a quote without network	Cached last 7 days; drafts saved locally and synced; clear "offline" banner, no silent loss	Manual test with airplane mode
Mobile	Every workspace screen usable one-handed	Primary action within thumb reach; touch targets ⩾ 44 px; no horizontal scroll	Design review checklist

Category	Requirement	Target	How verified
Accessibility	WCAG 2.1 AA on all customer-facing pages and PDFs	Contrast ≥ 4.5:1 (enforced by theme generator); keyboard navigation; labels on every input; PDFs tagged	axe in CI + manual screen-reader pass
Reliability	Uptime and recovery	99.5% monthly; RPO 1 h, RTO 4 h; nightly backups with a monthly restore drill	Status page, drill log
Security	Tenant isolation and auth	RLS on every table; sessions revocable; re-auth for billing and deletion; rate limits on portal forms and token lookups; OWASP top-10 review before pilot	Pen-test checklist in WBS 4.1
Privacy (DPDP)	Customer data handled lawfully	Consent line on the quote-request form; privacy notice per workspace; export and erasure within 30 days; data stored in India (Mumbai region)	Legal review; erasure job tested
Tax	GST correctness	CGST / SGST / IGST split by state; HSN on goods; invoice fields per GST invoice rules; numbering gap-free	Accountant review on sample invoices
Scale	Phase 1 capacity	2,000 workspaces, 50 k invoices / month, 1 M portal views / month without architectural change	Load test before pilot

Category	Requirement	Target	How verified
Observability	Know when a business is stuck	Error tracking, per-workspace audit log, funnel events (lead → quote → accepted → paid)	Dashboards before pilot
Localisation	English only in Phase 1, but ready for more	All strings in resource files; dates, currency and numbering formatted for en-IN; no concatenated sentences	Lint rule
Browser support	Where customers and staff actually are	Chrome Android last 3 versions, Safari iOS last 2, Chrome / Edge desktop last 2; WhatsApp and Instagram in-app browsers	BrowserStack smoke suite

Glossary

Oct 18, 2026 · @Ravin

One word per concept, used identically in UI copy, messages, PDFs and code. Where several words are common, the table names the one we use and the ones we avoid.

Terms

Term (use this)	Meaning	Not this
Accept	The customer confirms a quote on its page	Approve, sign, confirm (for quotes)
Add-on	An optional extra attached to a catalog item, priced separately	Extra, upsell

Term (use this)	Meaning	Not this
Approve	The owner confirms a payment proof; the only path to Paid in Phase 1	Verify, accept (for payments)
Booking	A reserved time with a staff member, from a quote or a bookable package	Appointment (allowed as a vertical label for salons), slot, reservation
Business	The company using Biz4Kit (the tenant)	Merchant, vendor, client, account
Catalog	The business's list of items and packages, public at its link	Menu (vertical label for restaurants), price list (the exported PDF only), store
Connector	A third-party integration behind an adapter: Razorpay, Stripe, Polar, Resend, WhatsApp	Integration, plugin, app
Customer	The person or company the business sells to; never has an account	Client (vertical label for agencies, IT), buyer, user
Item	One sellable thing in the catalog	Product, service, SKU (verticals may relabel in UI, the entity stays Item)
Invoice	A numbered request for payment; gap-free numbering	Bill, receipt (receipt is what follows payment)
Job	The work done for an accepted quote or booking, with checklist and photos	Service, task, order
Lead	A request for a quote, from the portal or entered by staff	Enquiry (allowed in customer-facing copy), prospect, opportunity
Member	A person with a login in a workspace, with a role	User, employee, staff (role name only)
Owner	The role with full control, including approvals and billing	Admin

Term (use this)	Meaning	Not this
Package	A fixed-price bundle of items, optionally tiered and bookable	Plan (reserved for Biz4Kit's own subscription), bundle, combo
Payment request	The UPI link, QR and bank details a customer uses to pay an invoice	Payment link (reserved for gateway links in Phase 2)
Plan	A Biz4Kit subscription tier: Free, Starter, Team, Agency	Package
Proof	A PDF or image showing a payment was made, uploaded for approval	Screenshot, receipt
Quote	A priced, versioned document the customer can accept	Estimate, proposal (vertical label for IT and agencies), quotation
Ready message	Pre-written text for an event that staff copy or share	Template (settings only), notification
Receipt	Confirmation sent after a payment is approved	Invoice, bill
Share	Hand a link, PDF or ready message to a customer by any channel	Send (reserved for Phase 2 automatic sending), export
Version	A revision of a quote under the same number	Revision, draft, copy
Workspace	One business's isolated space in Biz4Kit: data, members, brand	Account, organisation, tenant (code only)

Competitor glossary

Oct 18, 2026 · @Ravin

Owners arrive speaking Vyapar, Zoho, Refrens or Dukaan; we translate each of their words into one of ours, keep ours simpler, and show their old word once as a hint so nobody feels lost. Terms come from general knowledge of the four products; check the live apps before relying on an exact label.

Conversion rules

1. **One word per concept**, the one in our Glossary tab; a competitor word never appears as a label in our UI.
2. **Plain over accounting**: we say what the owner does (quote, share, get paid), not the ledger term (receivable, payment-in, debit note).
3. **Familiar-word hint, once**: on an owner's first visit to a screen, a small line says "Vyapar calls this Party" (based on the tool they told us at onboarding); dismissed, it never returns.
4. **Import mapping**: CSV exports from these tools map column headers to our fields automatically (Party Name → Customer, Item Name → Item, Rate → Price, GSTIN → GST number); AI ingest in Phase 2 handles the messy ones.
5. **If we lack their concept**, the hint says so and what to do instead ("We don't track stock; keep using your stock app, we handle quotes and invoices").

Term map

Their word	Used by	What it means there	Our word	Why ours is simpler
Party	Vyapar	Any customer or supplier	**Customer**	Owners sell to customers; we don't do purchases, so one side only
Contact / Customer / Client	Zoho, Refrens	The person billed	**Customer**	One word; "Client" allowed only as a vertical label for agencies and IT
Vendor / Supplier	Refrens, Zoho	Someone you buy from	not in Biz4Kit	We don't do purchasing; hint points to their accounting app

Their word	Used by	What it means there	Our word	Why ours is simpler
Item / Product / Service / Stock	Vyapar, Zoho	A sellable line, often with inventory	**Item** (relabelled per vertical: service, product, dish, deliverable)	No stock or godown; an item is just what you sell
Products / Store	Dukaan	Goods listed in an online shop	**Item / Catalog**	A catalog can hold services and quote-only items; a store can't
Catalog / Online store link	Dukaan	Public page to buy from	**Catalog**	Same idea; ours leads to a quote or a booking, not only a cart
Estimate / Quotation	Vyapar, Zoho, Refrens	A priced offer before an invoice	**Quote**	Shorter; a document the customer can accept on the page
Proforma invoice	Vyapar, Refrens	A quote shaped like an invoice, often for advance payment	**Quote, issued as proforma**	One object with a switch, not a second document type
Sale order / Order	Vyapar, Zoho, Dukaan	A confirmed purchase before delivery or billing	**Accepted quote** (and **Booking** or **Job** for services)	Acceptance is the order; no separate screen to maintain
Delivery challan	Vyapar	Goods-movement note without tax	out of scope (Phase 1)	Manufacturers may need it; decide with e-way bills in WBS 6.4
Sale invoice / Tax invoice	Vyapar, Zoho, Refrens	The bill	**Invoice**	One word

Their word	Used by	What it means there	Our word	Why ours is simpler
Retainer invoice / Advance	Zoho, Refrens	Bill for money up front	**Advance invoice** (from a quote with an advance %)	Created automatically on acceptance
Recurring invoice / Subscription	Zoho	Bill that repeats	**Recurring invoice** (Phase 2)	Same word, fewer settings
Payment-in / Payment received / Receipt voucher	Vyapar, Zoho	Record that money came	**Payment** (recorded with **Proof**, then **Approved**)	Says what happened; approval is explicit
Receivable / Udhaar / Outstanding	Vyapar, Refrens	Money owed to you	**Overdue list** and **Due**	A list to act on, not a ledger balance
Payment link	Refrens, Zoho, Dukaan	Gateway URL to pay	**Payment request** (Phase 1: UPI QR + bank); **Payment link** reserved for Phase 2 gateways	Keeps the manual and gateway paths distinct
Payment reminder	Vyapar, Zoho	Automated nudge for dues	**Reminder** (ready message in Phase 1, auto in Phase 2)	Same word
Credit note / Debit note	Vyapar, Zoho, Refrens	Corrections to an issued invoice	**Credit note** (Phase 2); no debit notes	One correction type is enough for service businesses
Expense	Vyapar, Zoho, Refrens	Money you spent	not in Biz4Kit	Not our job; CA export covers it

Their word	Used by	What it means there	Our word	Why ours is simpler
Ledger / Statement	Refrens, Vyapar	Running account per party	**Customer timeline**	Shows quotes, bookings, invoices and payments as events, not debits and credits
Lead management / CRM	Refrens	Pipeline of prospects	**Leads**	One inbox and a board; no CRM vocabulary
Projects / Timesheets / Time tracking	Zoho	Work logged for billing	**Job** (with time logged)	A job is what staff understand
Customer portal	Zoho, Refrens	Login area for customers	**My orders** (private link)	No login
Templates (invoice themes)	Zoho, Refrens	Choose an invoice look	**Brand** (set once)	One branded look everywhere instead of picking a theme per document
Organization / Company / Business profile	Zoho, Refrens	The tenant	**Workspace** (code) / **Business** (UI)	Owners say business
Godown / Warehouse	Vyapar	Stock location	not in Biz4Kit	No inventory
e-Way bill	Vyapar	Transport document for goods	decision pending (WBS 6.4)	Hint explains the current answer
Online store / Dukaan link	Dukaan	Shop URL to share	**Catalog link**	Same action, works for services
Orders	Dukaan	Purchases placed in the store	**Quote requests** and **Bookings**	Our customers ask or book; they don't check out

Their word	Used by	What it means there	Our word	Why ours is simpler
Coupons / Discounts	Dukaan	Price cuts at checkout	**Discount** on a quote or invoice	One place, set by the owner, no codes to manage
Themes / Plugins	Dukaan	Store appearance and add-ons	**Brand**, **Connectors**	Two words for two things
Dukaan Delivery	Dukaan	Shipping integration	not in Biz4Kit	Services and quotes don't ship
Abandoned cart	Dukaan	Buyer left without paying	**Quote not accepted** / **Follow up**	We follow up a person, not a cart

What this means for design

- The onboarding step "Which app do you use today?" (Vyapar, Zoho, Refrens, Dukaan, Excel, none) drives the familiar-word hints and the import mapping.
- Hints are a single line under the screen title, grey, dismissible, never a tour.
- Import screens show the mapping before saving so the owner can correct it; unmapped columns are listed, not silently dropped.
- Our Glossary tab wins every naming argument; this tab only explains how to get there from a competitor's words.
